HUDSON HARBOR TOWNHOMES

Tarrytown, NY

Historical inspirations, a community-wide transformation

Living on the water is a dream for many homeowners. Located on the eastern shore of the Hudson River, the townhomes at Hudson Harbor are a particularly desirable location. The project is just one phase of an effort to rejuvenate the riverside after the closure of a huge General Motors plant in recent years; in addition to reclaiming the prime waterside location for housing, the Hudson Harbor townhomes elevate the area's aesthetic by recreating classic New York City architectural style.

Developed with the aid of historic experts, the townhomes emulate brownstones built in Manhattan and Brooklyn in the nineteenth century, with multi-level, high-end designs. The attention to traditional detail extended to the energy-efficient windows. All the units have classic multi-pane appearances, generous dimensions and multi-unit assemblies to take full advantage of the expansive Hudson Harbor views. In addition, the site was planned to meet criteria for designation as a Leadership in Energy and Environmental Design (LEED) certified site, perfectly complementing the development's position in the middle of historic landmarks and forests.

PROJECT HIGHLIGHTS

- Three- and four-story homes built with stone facades, Botticino marble and sustainable-forest woods including mahogany floors
- Surrounded by landscaped gardens, sports fields, parks and Hudson River walk/bike paths plus the famous Hudson Harbor Yacht Club and Marina
- Includes ENERGY STAR® qualified residences and geothermal HVAC systems
- 36 townhomes in total; phase one also included construction of a 3-story building with 20 condos, and a clubhouse/recreation center
